

MONTHLY UPDATE ON FOOD SECURITY AND PRICES IN RURAL AND URBAN AREAS

ISSUE #30, World Food Programme

Monthly Update on Food Security and Prices is produced by the Vulnerability Analysis and Mapping (VAM) Unit of the World Food Programme Country Office in the Kyrgyz Republic as a contribution to periodic food security monitoring in the country. This is the 30th issue of the update.

Highlights

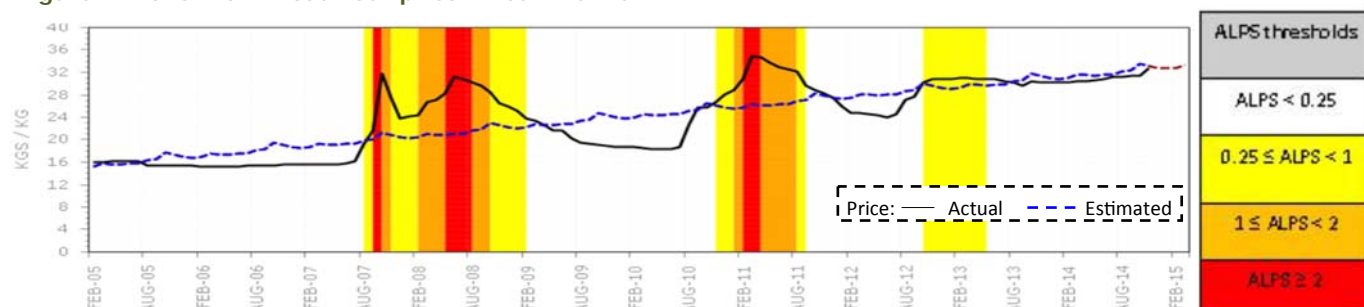

- ◆ The national average retail price of wheat flour did not change on a month-on-month basis in January 2015 (**Figure 2**). However, it is still 19 percent higher than the same month of 2014.
- ◆ The export price of wheat in Kazakhstan (Free on Board [FOB] rate) did not change on a month-on-month basis in January 2015 (**Figure 3**). However, the US FOB price decreased by 8 percent in January 2015.
- ◆ The Kyrgyz Som depreciated against the US dollar by 3 percent on a month-on-month basis and 14 percent during the last six months (August 2014–January 2015), and by 19 percent when compared to the same month last year (**Figure 4**).
- ◆ The national average price of Petrol 92 decreased by 10 percent in January 2015 on a month-on-month basis. Similarly, the average price of diesel decreased by 14 percent in January 2015 (**Figure 5**).
- ◆ The prices of beef and mutton decreased by 1 percent on a month-on-month basis in January 2015, but prices are 7 percent and 10 percent higher than in January 2014 for mutton and beef respectively (**Figure 6**).
- ◆ The prices of potatoes and cabbage increased by 6 percent and 23 percent respectively on a month-on-month basis. The price of onions remains 87 percent higher than in the same month last year (**Figure 7**).
- ◆ The average wage rate in November 2014 was 10 percent higher than in November 2013 (**Figure 8**), while the national average price of wheat flour increased by 18 percent during the same period. This shows a slight deterioration of wheat flour purchasing power among households reliant on income from wage labour.
- ◆ From January to October 2014, the volume of incoming remittances was almost at the same level as in the previous year. However, the volume was lower by 20 percent and 32 percent respectively, in November and December 2014, compared with the same months of 2013 (**Figure 9**).
- ◆ From October 2014 to January 2015, seasonal precipitation has been above the historical average in most areas of the country, except in December 2014. (**Figure 10**).

Alert for Price Spikes (ALPS) for early detection of price hike

The Alert for Price Spikes (ALPS) provides early warning of rising food prices by detecting abnormally high levels of local food prices. The ALPS calculates the difference between the latest observed price available and the corresponding seasonal price trend. Colour-shaded bars indicate the periods where the actual price (black line) was above the estimated trend (blue dotted line). The ALPS attributes colour codes according to the severity of the gap between the two lines. The ALPS is updated each month using the latest price data available for the main staples in more than 30 countries.

WFP has conducted ALPS analysis for wheat prices in Bishkek using long-term price data from the National Statistics Committee. The analysis in **Figure 1** illustrates that wheat flour prices experienced an alarmingly higher than normal seasonal trend from mid-2007 to mid-2008 and from late 2010 to mid 2011. The price level in January 2015 was within the normal pattern of the price series. The intensity of price abnormalities are classified using standard deviations (STD).

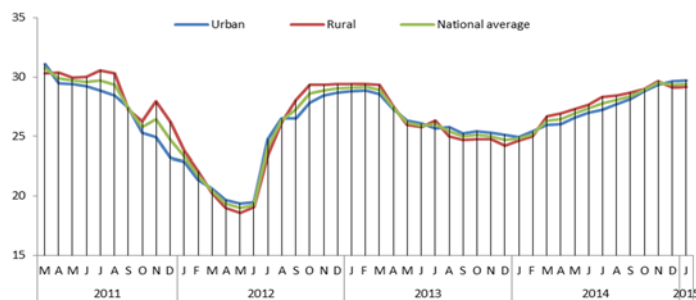

Figure 1. Abnormal wheat flour price hikes—Bishkek

Data source: National Statistics Committee, analysis provided by WFP

Wheat flour prices in urban and rural areas (January 2015)

Figure 2. Retail prices of wheat flour (KGS/kg)

Data source: WFP Monthly Market Monitoring

The national average retail price of wheat did not change on a month-on-month basis in January 2015 (**Figure 2**). However, it is still 19 percent higher than the same month of 2014.

International prices of wheat flour (January 2015)

Figure 3. Wholesale price of wheat (USD/ton)

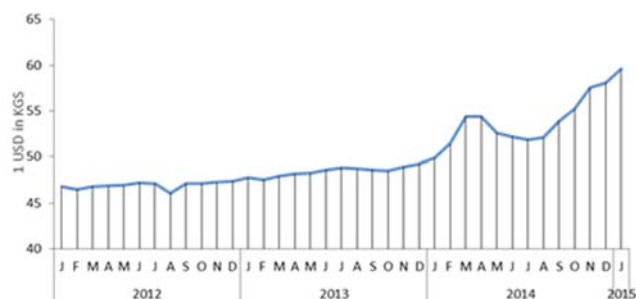

Data source: FAO GIEWS (Kazakhstan FOB, Gulf of Mexico US FOB)

The export price of wheat in Kazakhstan (Free on Board [FOB] rate) did not change on a month-on-month basis in January 2015 (**Figure 3**). However, the US FOB price decreased by 8 percent in January 2015 on a month-on-month basis.

Currency exchange rate (January 2015)

Figure 4. Exchange rate of US dollar against the KGS

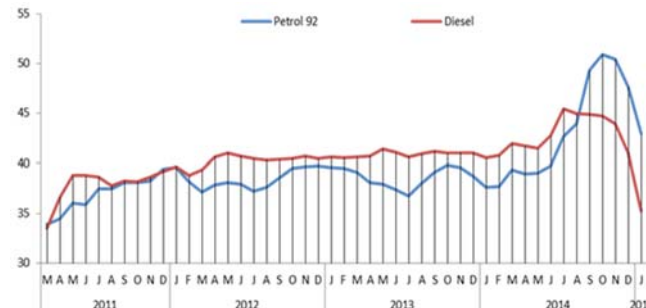

Source: National Bank of the Kyrgyz Republic

The Kyrgyz Som (KGS) depreciated against the US dollar by 3 percent on a month-on-month basis and 14 percent during the last six months (August-January), and by 19 percent when compared to the same month last year (**Figure 4**). The sharp depreciation will likely affect fuel prices and retail prices of the main imported food commodities, including wheat.

Fuel prices (January 2015)

Figure 5. Retail prices of fuel (KGS/litre)

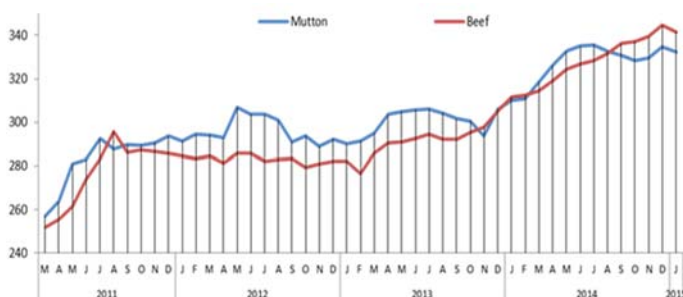

Source: WFP Monthly Market Monitoring

The national average price of Petrol 92 decreased by 10 percent in January 2015 on a month-on-month basis. However, the price in January 2015 was 14 percent higher than in the same month in 2014 (**Figure 5**). Similarly, the national average price of diesel decreased by 14 percent in January 2015, and by 13 percent when compared to the same month last year in 2014.

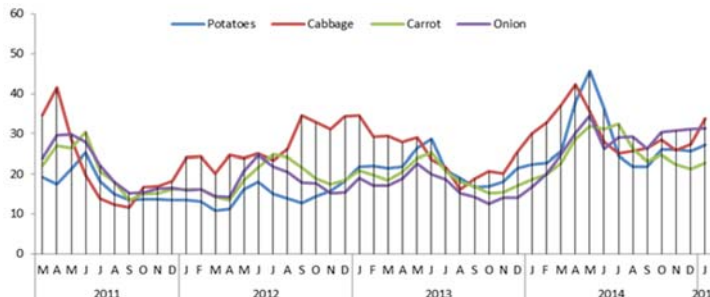

PRICES OF OTHER BASIC COMMODITIES (JANUARY 2015)

Meat: The prices of beef and mutton decreased by 1 percent on a month-on-month basis in January 2015, but prices are 7 percent and 10 percent higher than in January 2014 for mutton and beef respectively (**Figure 6**).

Potatoes and vegetables: The prices of potatoes and cabbage increased by 6 percent and 23 percent respectively, on a month-on-month basis. The price of onions remains 87 percent higher than in the same month last year (**Figure 7**).

HOUSEHOLD PURCHASING POWER

Wage rates

Figure 8. Average wage (average of all sectors, KGS/month)

Data source: NSC

The average wage rate in November 2014 was 10 percent higher than in November 2013¹ (Figure 8), while the national average price of wheat flour increased by 18 percent during the same period (Figure 2). This shows a slight deterioration of wheat flour purchasing power among households reliant on income from wage labour.

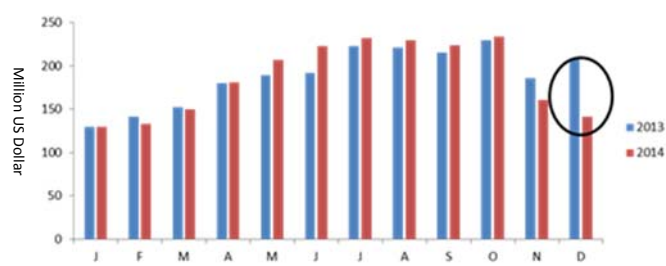

WATER AVAILABILITY

October to April constitutes a critical rain and snow season, during which most of the Kyrgyz Republic receives its annual rain or snowfall. Seasonal precipitation during this season is an important climatic parameter in the context of agricultural production in the Kyrgyz Republic, given that large amounts of water for domestic and agricultural use originate from snow melt.

From October 2014 to January 2015, seasonal precipitation has been above the historical average in most areas of the country, except in the month of December 2014. Close attention should be paid to precipitation in the next few months.

Remittances

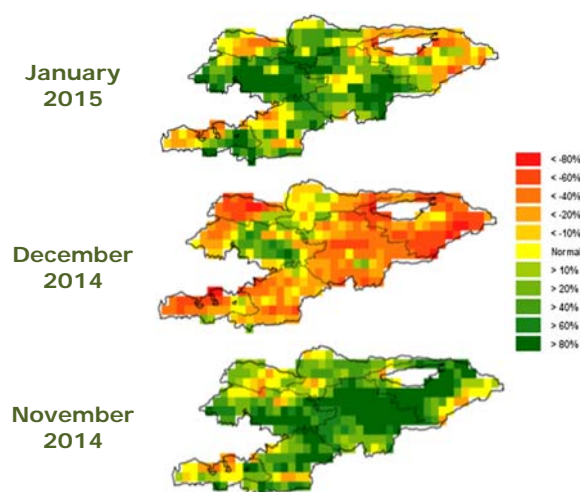

Figure 9. Aggregate volume of incoming remittances (mln. USD/month)

Data source: National Bank of the Kyrgyz Republic

From January to October 2014, the volume of incoming remittances was almost at the same level as in the previous year. However, the volume was lower by 20 percent and 32 percent respectively, in November and December 2014 compared with the same months of 2013 (Figure 9).

Figure 10. Relative difference in precipitation compared to long term average

OUTLOOK FOR THE NEXT FEW MONTHS

The higher prices for some basic commodities, such as meat, potatoes and vegetables, may put pressure on already limited economic food access among the most vulnerable households, potentially worsening the diets of these households. These effects could be further exacerbated during early spring, when additional resources for agricultural inputs are required.

Economic access to basic food may also be further affected by reduced remittances, especially among households who rely on income from labor migration for food expenditure. In the months ahead, WFP will pay close attention to changes in food prices, remittances, labour migration patterns and household coping strategies, particularly with regard to the quality of food consumption among vulnerable groups.

¹Wage rate figures are only available up to November 2014, and therefore comparisons have been made for the same period regarding wheat flour prices.

ANNEX 1—PRICES OF BASIC COMMODITIES IN RURAL AND URBAN MARKETS (JANUARY 2015)

The retail prices of basic commodities are monitored on a monthly basis in selected rural and urban markets in all oblasts (provinces) of the country. The latest retail prices are compared against prices in the previous month, three months ago, and one year ago.

▲ Price increase above normal price fluctuation
► Normal price fluctuation
▼ Price decrease below normal fluctuation

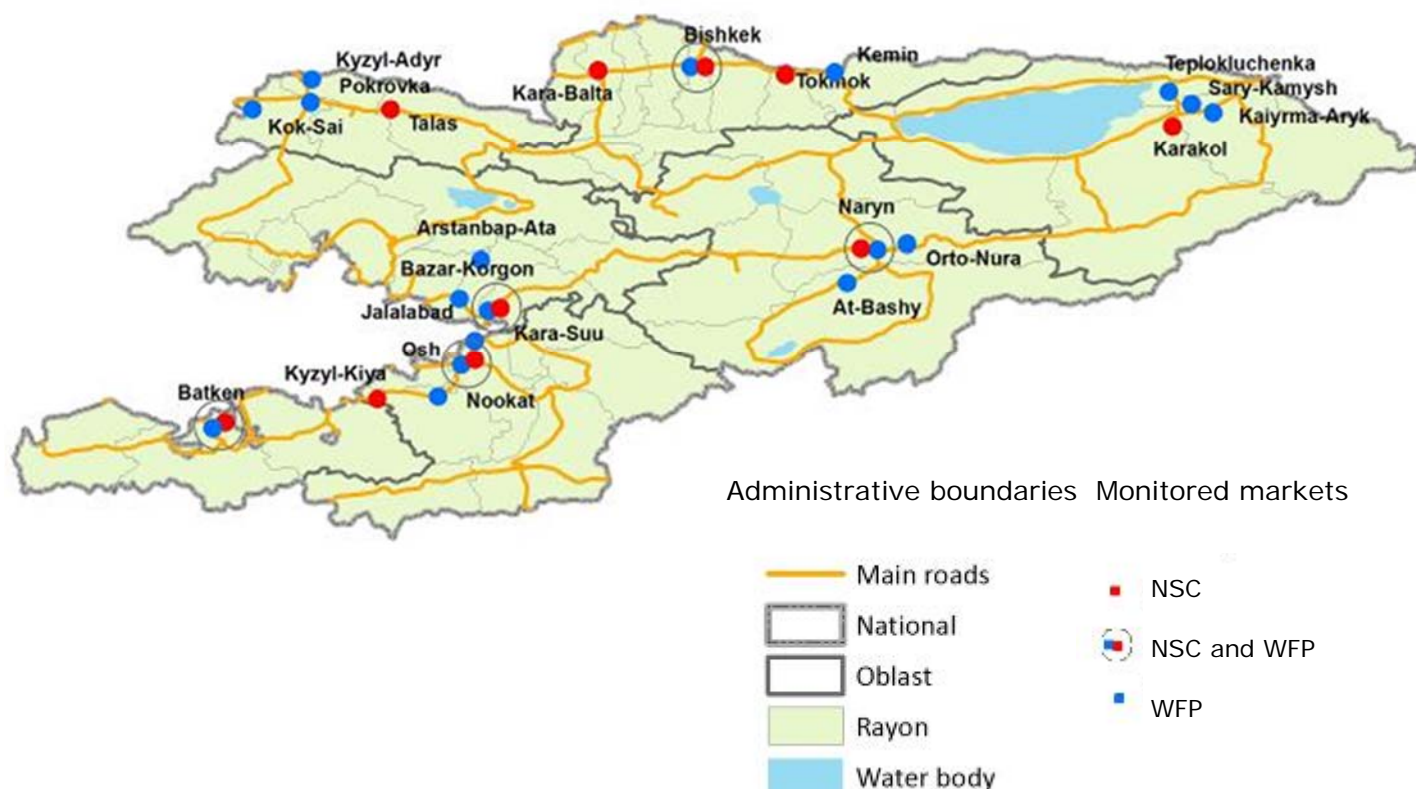

Price fluctuation is considered normal if change within:
5% for 1 month, 10% for 3 months, 15% for 1 year

ANNEX 2 – MARKET LOCATIONS MONITORED BY WFP AND NSC

Retail prices of basic food commodities are monitored and reported by the NSC in selected province and rayon capitals (coloured in red).

WFP monitors prices of basic food commodities in seven markets in urban areas and thirteen markets in rural areas, where more than two thirds of people classified as 'poor' live.

Increased and volatile food prices will affect food insecure and vulnerable families the most because they spend the largest proportion of their household budgets on food.

The price data of this report reflects WFP's actual monthly recording of prices in seven urban and thirteen rural markets around the country, as well as in urban settlements monitored by the NSC. Should any recipient of this bulletin require information from previous monitoring conducted by WFP since June 2009, please contact the WFP Country Office in the Kyrgyz Republic at WFP.Bishkek@wfp.org

Monthly bulletins and more food security analysis publications are available at:

www.wfp.org/countries/kyrgyzstan/publications
