Issue No. 2 September 2016

wfp.org

IRAQ Market Monitor Report

Highlights

- In a Rapid Market Assessment conducted in Salah Al-Din, WFP found markets to be functional, main food commodities and available to cover consumers' demand at reasonable prices. However the situation keeps being volatile and WFP is closely monitoring market functionality and its implications for the food security of the Iraqi population.
- The cost of the food basket has decreased by 1% but prices of main commodities are still 6% higher in hard to reach areas and the purchase power of population leaving in these locations is 24% lower compared to the rest of the country.
- Food availability in Falluja, Alqaiam and Shirqat is a critical issue, with key informants reporting worrisome messages about lack of staple food and reliance on emergency coping strategies.

Socioeconomic Background

The Mosul offensive and resulting waves of displacement keep stressing the markets in Iraq. In September Qayyarah and Shirqat were re-taken from Islamic State (IS) by Iraqi forces. WFP is coordinating with the Government of Iraq's public distribution system (PDS). WFP is working to fill gaps in PDS provision and make food available to the most vulnerable. This process has been effective in newly retaken areas of Qayyarah and Shirqat.

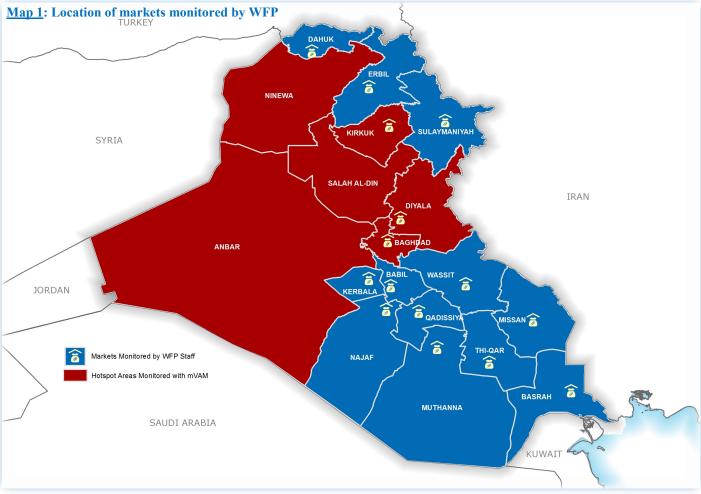

In September WFP conducted a Rapid Market Assessment in Salah Al-Din

governorate to asses market functionality after the last wave of displacement. The main objective of this assessment was to analyze if markets are able to respond to demand. increased Markets are functional, and main food commodities are available to cover consumers' demand at reasonable prices¹. However the situation keeps being volatile and WFP is closely monitoring market functionality and its implications for the food security of the Iraqi population. A snapshot of the current situation is presented in the below dashboard².

VFP/Inger Marie Vennize

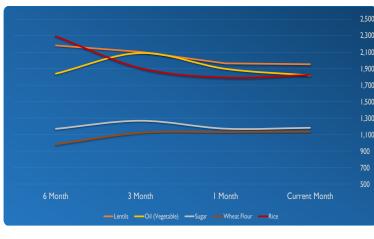

² OCHA - Iraq: Humanitarian Snapshot (October 24, 2016)

Food National Price Trends

The prices of the main food commodities in August have overall slightly increased in September after three months of decreasing trend started in June. Prices of single main commodities have behaved differently at national level (Chart 1). The cost of the minimum food basket has behaved very differently amongst

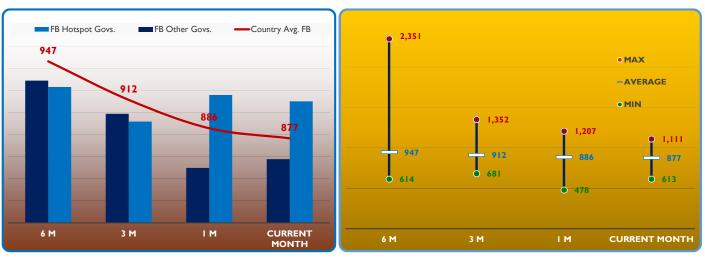

governorates though. In Anbar the prices of main food items have overall decreased by 15% from August 2016 and in Thi-Qar by 13%. Higher decrease was registered in Sulaimaniyah (-24%). The trend has been positive (lower costs) for the sixth month on a row, showing how markets are recovering from the conflict and the subsequent liberation of the areas from IS. On the other hand Kirkuk (+25%) and Wassit (+43%) have registered a concerning increase of the cost of the minimum food basket. The national average

absorbs these hikes and only registers a decrease of 1% (Chart 2). Regarding staple commodities, no main changes have been registered on a national scale with vegetable oil being the commodity with higher change from the previous month (-4%). Nevertheless the price of some commodities is very different from governorate to governorate. For instance the cost of sugar has increase by 38% in Qadisyia, while decreasing by 45% in Sulaimaniyah, picturing an opposite situation from previous month. This to confirm that market integration

<u>Chart 2</u>: Cost of Minimum Food Basket (in IQD)

Chart 3: Min. vs. Max. Cost of Food Basket (in IQD)

across the country is still very low, yet slowly improving (Chart 3). Regarding vegetable oil, it was found to be 29% more expensive in Kirkuk. Meat which on average is only 2% higher than last month, was found to be much cheaper in Salah Al-Din (-28%) and Dohuk (-10%). Lentils have been found cheaper this month compared to August, especially in Anbar (-13%), Ninewa (-8%) and Dohuk (-7%). On the other hand the same food item is more expensive in Kirkuk (+12%) and Salah Al-Din (+7%). Onion's price is also very different across governorates. It was indeed found to be cheaper in Sulaimaniyah (-38%) while highly increased in Muthana (+38%), Missan (+33%), Basrah (+33%), Babylon (+25%) and Qadisyia (+25%). Details by commodity and by governorate are presented in Annex 1 and Annex 2.

As showed in Chart 2 above, the cost of the food basket is still higher in hotspot locations where on average a food basket price is 6% higher than in the rest of the country. Nevertheless there is a convergence, due mostly to the high increase of the food basket cost in non-hard to reach areas while a slight decrease is registered for hotspot locations where districts that were under control of IS have been slowly but steady recovering from the occupation.

It has also to be taken into consideration that averages don't include location where food commodities have been reported as not available (see Methodology).

Unskilled Labor Wages and Term of Trade (ToT)

The wage of unskilled labor has resumed rising in hotspot locations after two months of decreasing trend, while it is stabilizing in the rest of the country. Despite the convergence, the difference remains huge. On average an unskilled worker's wage is 24% lower in hotspot areas compared to the other governorates.

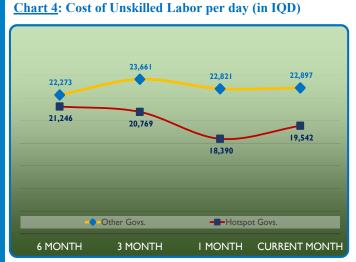

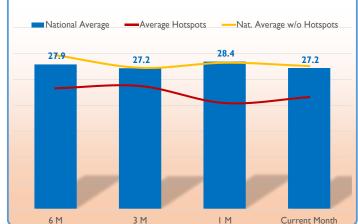

Chart 5: Wage-to-Food Terms of Trade (in food baskets/day)

Looking at governorate level, Babylon and Qadissyia still register the highest daily wages at IQD 30,000, while Erbil offers the lowest daily stipends (IQD 12,000). A relevant decrease of wages was recorded in September in Sulaimaniyah (-17%) while significant increases were recorded in most of the hard-to-reach areas (Chart 5).

Focus on Hard to Reach Areas

Hard to reach areas are locations widespread in six governorates (Anbar, Baghdad, Diyala, Kirkuk, Ninewa and Salah Al-Din) where WFP complements its traditional data collection with mVAM methodology. When looking in details at these governorates, the food basket cost in the last six months has followed different trends within the six areas and compared to the rest of the country. In Anbar it has decreased for the last six months and dropped by 15% in September 2016 only. Similar trend is registered to a smaller extend in Baghdad and Ninewa. On the other hand, Kirkuk has registered a constant increase in the last six months, while Diyala has changed the decreasing trend of the previous month with a minor increase in September 2016 (Chart 6).

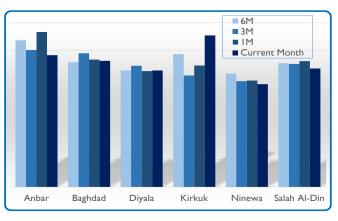

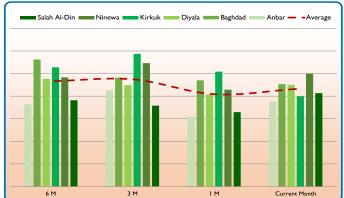

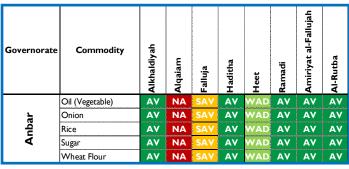

Chart 7: Wage-to-Food ToT in Hotspot Areas

The cost of the food basket affected the wage-to-food ToT, which has increased in Anbar (18.8), Diyala (22.5), Ninewa (25) and Salah Al-Din (20.7). Differently Kirkuk (20) and Baghdad (22.7) have seen a decrease in the purchasing power of unskilled laborers (Chart 7).

In conflict affected and occupied areas, food availability is the most crucial issue. In Falluja and Alqaiam key informants reported that food is still unavailable or scarcely available. Other districts in Anbar seem to have been recovering after the liberation from IS forces (Chart 8). Key informants have indeed reported several times that no food is available. In Salah Al-Din the isolation of Shirqat is

still evident. Most of staple commodities are not found in the market. mVAM respondents were still sending worrisome messages in the first weeks of the month, <u>Chart 9</u>: Food Availability Analysis in Salah Al-Din

reporting that the city was sieged and people were getting killed. In the last week though, when the Iraqi forces liberated the city, key informants reported that they are receiving food from army to compensate lack of market supply. It has also to be highlighted that PDS has not been delivered in these areas for months.

Methodology

Market information is collected on weekly basis by WFP field monitors. Additionally WFP in partnership with Islamic Relief Worldwide (IRW) collects market data remotely through mVAM technology from key informants in those governorates where access is restricted, using telephone interviews. Data are then cleaned and consolidated. Monthly averages are used for the Iraq Monthly Monitor Report. Map 1 shows the location of the WFP monitored markets as well as the hard to reach areas monitored through mVAM.

Field monitors collect prices for 23 food commodities, 3 fuel items, 7 hygiene commodities and the cost of unskilled labor for one day of work. WFP field monitors cover 12 governorates where access is not restricted plus three additional governorates (Kirkuk, Baghdad and Diyala) when the security situation allows. IRW key informants collect market prices of 8 main food commodities and the daily wage of unskilled labor from six hard to reach areas in central and northern governorates of Iraq (Anbar, Baghdad, Diyala, Kirkuk, Ninewa and Salh Al-Din) through mVAM technology.

The report is based on the analyses produced by the Integrated Market Surveillance Tool (IMST). The IMST is an agile market monitoring tool that was developed for Iraq Country Office (CO) and is aimed at storing raw data collected by field monitors and key informants, and creating contextualized analyses. The tool analyzes trends of main food and non-food commodities, minimum food basket, and provides an indication about how much the markets are integrated within and across governorates. Food and non-food prices are analyzed against previous periods, including key baselines, such as the pre-crisis values of February 2015. Non-food items prices are not reported in this report unless a change in the price level has an impact on food security.

The IMST also includes information regarding the availability of main food commodities in hotspot locations, which is collected by key informants. The classification of the availability is based on the monthly averages. A commodity is classified as Available when it is found available on every visit in the key market of a specific governorate; Widely Available when for only one visit the availability is not full; Sporadically Available when in

at least half of the visits, the commodity is recorded as rare in the market; a commodity is Mostly Not Available when it was found only in rare cases in a governorate during the analyzed month; finally a commodity is classified as Not Available when it is not found in any market of a governorate at any time.

The minimum food basket monitored by WFP contains five food commodities. The quantities are adjusted against the survival caloric intake needs. The five commodities are wheat flour, sugar, rice, vegetable oil and onion.

The IMST also provides specific and customizable analyses on hotspot areas, with district and sub-district level information. This allows to detect local issues regarding market price, availability as well as any other information regarding the specific market catchment area, including security and coping mechanism commonly adopted in the area. Given the unstable context the IMST is flexible enough to allow ad hoc analysis whenever required.

The Iraq Market Monitor Report is issued since August 2016 on a monthly basis.

NOTE: Due to the long-lasting conflict in Falluja and the related impact on markets, to avoid distortions on average price analyses by governorate and maintain consistency over time, the Falluja district has been removed from all analysis related to Anbar. Falluja's information and data are analyzed aside in districtlevel analyses.
