The ongoing socio-political crisis, displacements, disruption of livelihood activities, deterioration of the economy, high food prices, and climatic shocks remain the key drivers of food insecurity in Burundi.

Food assistance is provided through targeted distributions; nutrition activities supporting treatment and prevention of moderate acute malnutrition among children under the age of five, pregnant and nursing women; and livelihood and asset creation programmes.

WFP assists refugees through combined food and voucher transfers, which was a recommendation of the 2013 WFP-UNHCR Joint Operational Evaluation of the combined voucher and in-kind food assistance programme for camp-based refugees. The mid-term review concluded that compared with in-kind food distributions, vouchers resulted in an equivalent, or slightly higher food consumption score and fewer negative coping strategies, reducing the exchange of rations for other items and making household rations last longer.

Through the livelihood and asset creation activities, WFP provides food assistance during the lean season. Food insecure households with limited access to markets receive vouchers during the post-

### In Numbers
- **439,042** school children assisted
- **37,729** refugees assisted
- **31,278** people assisted through treatment of moderate acute malnutrition programmes
- **32,171** people assisted through stunting prevention
- **27,340** people assisted through cash for assets and resilience

The Protracted Relief and Recovery Operation (PRRO) provides food and nutrition assistance to Congolese refugees living in camps; Burundian returnees from neighbouring countries and other vulnerable food insecure households facing food crisis or sudden shocks.
**Operational Updates**

According to the November 2017 FEWSNET report, staple food prices remain above the five-year averages, driven largely by the country’s fragile macro-economic situation. In Kirundo, from August to early November, there was a marked jump by about 20 percent in bean prices, which was a similar rise that occurred in November 2016. Bean prices are expected to ease slightly by the end of November ahead of the harvests, but maize prices are likely to remain high due to the Fall Armyworm (FAW) infestation.

Besides the low altitude areas of Bubanza, Cibitoke, and Kirundo provinces where there was late and below-average rainfall that has affected maize development, Season A crops are growing normally. The FAW infestation, particularly in lowland areas, may also negatively impact maize production, but maize constitutes only about 14 percent of Season A national cereal production.

WFP and the International Federation of the Red Cross (IFRC) are implementing a joint capacity strengthening initiative for the Burundi Red Cross (BRC). The overall objective of this initiative is to enhance the capacity of the local Red Cross to effectively respond to emergencies and support sustainable development in Burundi. The following demand-driven areas for capacity strengthening of the national society have been identified jointly by BRC, IFRC and WFP: a) community-based early warning systems, b) in-kind food assistance for emergency preparedness and response, c) cash-based assistance, and d) supply chain management.

**Impact of Limited Funding**

Limited funding continues to negatively affect the implementation of the CP and PRRO activities. New contributions are urgently required for both the CP and PRRO to avert food and cash transfers’ shortages.

**Country Background & Strategy**

Burundi is facing a socio-economic crisis and a notable increase in food insecurity. The high population density is contributing to competition and disputes over scarce natural resources. Due to the demand for land, the poorest and most vulnerable populations, who are mainly women, generally depend on marginal lands and lack the capacity to cope with severe shocks such as droughts, epidemics and floods, which often claim lives and undermine livelihoods. Domestic food production is insufficient to meet the needs of the population, which renders the country vulnerable to economic shocks and fluctuating agricultural prices. Malnutrition is a major concern. While the findings of the 2014 Comprehensive Food Security and Vulnerability Analysis (CFSVA) show some improvement, the food security and nutrition indicators remain alarming. The average national stunting prevalence is very high at 50 percent, and most provinces in the north and east of the country suffer from even higher rates ranging between 50 and 60 percent.

WFP’s strategy is aligned with the government’s Poverty Reduction Strategy Paper II (2012 - 2016) promoting a progressive shift from humanitarian interventions to longer-term objectives to address some of the root causes of food insecurity. Both operations pursue Sustainable Development Goal 2, “Achieve zero hunger”. The PRRO’s is aligned with WFP’s strategic objectives 1 and 2 - save lives and protect livelihoods in emergencies and support or restore food security and nutrition and establish or rebuild livelihoods in fragile settings and following emergencies. The CP is aligned with strategic objective 3 and 4 - reduce risks and enable people, communities and countries to meet their own food and nutrition needs and reduce undernutrition and break the intergenerational cycle of hunger.

WFP has been present in Burundi since 1968.

**Population:** 10.1 million  
**2015 Human Development Index:** 184 out of 188  
**Income Level:** Low  
**Chronic malnutrition:** 56% of children between 6-59 months
