REVISED SCHOOL FEEDING POLICY

Informal Consultation

18 October 2013

World Food Programme
Rome, Italy
EXECUTIVE SUMMARY

This paper updates WFP’s 2009 school feeding policy four years after its approval. It clarifies WFP’s new approach of supporting government-led programmes, and outlines innovations. The revised policy increases alignment with the new Strategic Plan (2014–2017), the draft Strategic Results Framework, and the safety net and nutrition policies, and supersedes the 2009 policy.

What’s New?

While continuing to advocate for the universal adoption of school feeding programmes that help increase children’s access to learning opportunities and improve their health and nutrition status, WFP will focus increasingly on helping countries to establish and maintain nationally owned programmes linked to local agricultural production. In countries still requiring WFP’s operational support, it will implement school feeding programmes with clear hand-over strategies, where appropriate.

WFP will engage in policy dialogue and provide technical assistance, using its own experience and that of individual countries through the WFP Centre for Excellence Against Hunger in Brazil and other South–South initiatives. It will systematically assess progress in the transition to national ownership in all operations, using the Systems Assessment for Better Education Results framework developed with the World Bank, and will track the costs of its school feeding projects.

In line with the global emphasis on improving the quality of education, WFP will help ensure that school feeding contributes to learning, and has reinforced its partnership with the United Nations Educational, Scientific and Cultural Organization and the United Nations Children’s Fund through the Nourishing Bodies, Nourishing Minds initiative. WFP will also continue its successful partnership with the World Bank and the Partnership for Child Development and will strengthen its partnership with the Food and Agriculture Organization of the United Nations on supporting links between school feeding and local agricultural production.

WFP will work with partners to assess the cost-effectiveness of school feeding, with its many outcomes, and the efficiency of different implementation models. WFP will explore better ways of reaching beneficiaries, such as by using cash and vouchers to replace take-home rations or to enable local procurement. WFP will assess individual cases to decide whether to purchase higher-priced, locally produced food, given the potential to benefit the local economy and increase the sustainability of school feeding programmes.

WFP will continue to ensure that school feeding addresses micronutrient deficiencies among schoolchildren. The primary delivery mechanism will continue to be through multi-fortified foods where foods with high micronutrient contents are not readily available or are unaffordable. Where feasible, WFP will explore ways of diversifying the food basket, including with fresh and locally produced foods.

WFP will support governments in considering nutrition concerns – including emerging overweight and obesity issues – in the design and implementation of school feeding programmes. WFP will seize opportunities for reaching adolescent girls through school feeding programmes, including to deliver micronutrients and nutrition education.
Revised corporate outcome and output indicators in line with the new Strategic Plan and this revised policy are included in the Strategic Results Framework. WFP will administer a global school feeding survey every two years to measure progress in implementing the revised policy against the five policy goals, which replace the eight school feeding quality standards of 2009. More than half of the sustainable national programmes currently being implemented in 64 middle- and low-income countries began with support from WFP. This revised policy presents results and lessons learned from analyses of these experiences over the last five years. By adopting these new policy directions, WFP will be better placed to assist governments in developing effective school feeding programmes that contribute to the elimination of poverty and hunger and promote prosperity.
THE SHIFT IN THINKING ABOUT SCHOOL FEEDING AND WFP’S POLICY EVOLUTION

1. Prior to the 2008/09 food and financial crises, the development community viewed school feeding as primarily a food aid tool to enhance access to education. Since the crises, however, it has become evident that governments consider these programmes as safety nets, which – in addition to their contribution to education – also provide direct food support to affected children and their families, as part of national poverty- and hunger-reduction policies.

2. The Rethinking School Feeding report, published in 2009 in response to government demand for better information about school feeding, confirmed that as countries develop, their capacity to fund and manage school feeding programmes increases and their reliance on external assistance decreases as they progress along the “transition to sustainability”.¹

3. The 2009 publication also established that school feeding programmes are important not only for their educational benefits, but also because in the short term they provide a safety net during crises and in the long term they act as investments in human capital, local economies, hunger reduction and equity.

4. The findings of Rethinking School Feeding prompted WFP to change its own school feeding policy in the context of the broader shift from food aid to food assistance. The 2009 policy introduced the safety net element and repositioned WFP’s school feeding approach to emphasize sustainability, with WFP providing time-bound support with the objective of eventually phasing out its assistance.²

5. In 2009, WFP reinforced its partnership with the World Bank and the Partnership for Child Development (PCD) to support the new policy direction by establishing a research agenda, undertaking the first global quantitative review of school feeding,³ providing technical support to governments, and developing tools and guidance to help countries through the transition to national ownership.

6. In 2011, to enhance its capacity to support governments, WFP established a Centre of Excellence Against Hunger in partnership with the Government of Brazil. As a platform for South–South cooperation, the centre benefits from Brazil’s experience of hunger reduction, including school feeding. The centre helps governments establish national programmes by engaging in high-level policy dialogue, facilitating study visits and providing technical assistance.

7. In 2012, WFP updated its programme guidance and trained programme officers from 50 countries, emphasizing topics such as policy dialogue and the transition to national ownership. In the last quarter of 2012, the online Global School Feeding Network was launched, enabling WFP field staff to exchange good practices.

8. In 2012, in response to recommendations from a corporate evaluation of the school feeding policy,⁴ WFP management committed to revising the policy to develop WFP’s new approach, clarify its own objectives and guide country offices on the limitations

² “WFP School Feeding Policy” (WFP/EB.2/2009/4-A)

⁴ See “Summary Evaluation Report of WFP School Feeding Policy” (WFP/EB.1/2012/6-D).
and trade-offs in WFP’s school feeding efforts. The need for a revision was emphasized by: i) launch of the Nourishing Bodies, Nourishing Minds initiative for improving education quality and learning; ii) growing awareness of the double burden of malnutrition, and the reform of national school feeding programmes to address this issue; iii) growing interest in local food purchase; and iv) country-level innovations in school feeding.

This paper updates WFP’s 2009 school feeding policy four years after its approval, and is part of the evolving policy framework for school feeding. It clarifies WFP’s new approach of supporting government-led programmes, and outlines innovations. The revised policy increases alignment with the new Strategic Plan (2014–2017), the draft Strategic Results Framework (SRF) and the safety net and nutrition policies. It also takes into account learning from South–South collaboration facilitated by the Centre of Excellence Against Hunger, and the first global quantitative review of school feeding. By presenting revised objectives, policy goals and expected outcomes, this revised policy supersedes the 2009 policy. WFP expects to produce a new policy in the next few years, incorporating insights from implementation of the Strategic Plan, research and practical experience.

WFP’S STRATEGIC DIRECTION IN SCHOOL FEEDING

School Feeding Worldwide and WFP’s Vision

WFP’s State of School Feeding Worldwide, published in May 2013 in collaboration with the World Bank and PCD, presents the first global picture of school feeding and provides the context for WFP’s evolving policy. The report estimates that at least 368 million children worldwide receive school meals, with an annual investment of US$47–75 billion a year (see Figure 1).

WFP supports governments in reaching 7 percent of these children – approximately 24.7 million – mostly in low-income countries where school feeding coverage is lowest and needs are greatest; at 49 percent of primary schoolchildren, coverage in lower-middle income countries is significantly higher than in low-income countries, at 18 percent.

In many high-income countries, school feeding is an important element of national social protection systems, and – along with other safety nets – an integral part of care for the most vulnerable. WFP’s support is focused primarily on low-income countries, where school feeding is less well institutionalized: only 30 percent of these countries have a school feeding policy framework, compared with 86 percent of high-income countries. Low-income countries also depend greatly on donor assistance, which accounts for 83 percent of resources for school feeding in these countries (see Figure 2) – much of it channelled through WFP.

---

5 The double burden of malnutrition refers to the persistence of undernutrition, especially among children, along with a rapid rise in overweight, obesity and diet-related chronic diseases.

6 This policy document will be modified to reflect any changes to the final SRF.

7 “Update of WFP's Safety Nets Policy” (WFP/EB.A/2012/5-A).

8 “WFP Nutrition Policy” (WFP/EB.1/2012/5-A).

9 This revised policy uses the World Bank classification of countries by income groups. High- and upper-middle income groups are combined because the characteristics of school feeding in these two groups are similar. Lower-middle and low-income countries differ greatly in terms of school feeding budgets, costs and implementation. See State of School Feeding Worldwide 2013.
WFP’s overarching vision is to continue advocating for the universal adoption of school feeding programmes as a safety net that helps increase children’s access to education and learning opportunities and strengthens their health and nutrition status. WFP will focus increasingly on helping countries to establish and maintain nationally owned programmes linked to local agricultural production. In countries still requiring WFP’s operational support, it will implement school feeding programmes with clear hand-over strategies, where appropriate.
The Transition to Nationally Owned Programmes

14. Since 1970, 38 countries have transitioned from WFP-supported to nationally led and funded programmes. Three factors are critical for this transition: i) an appropriate policy or legal framework; ii) the institutional capacity to implement a programme; and iii) the financial capacity to fund it. Generally, the move from low-income to lower-middle income country status is the strongest indicator of readiness to finance a school feeding programme, while external funding and support continue to be justified in fragile and low-income contexts. As countries develop, their reliance on external support should decrease.

15. Over the past three years, WFP and the World Bank have worked with governments and other partners\(^\text{10}\) to develop a framework for systematic planning of the transition to national ownership. The Systems Approach for Better Education Results (SABER) framework enables countries to assess their transition stage, devise strategies for improving the quality and sustainability of programmes, and track progress.\(^\text{11}\) It defines four transition stages:

- **Stage 1 – Latent:** *Unstable contexts, limited capacity.* Government relies on WFP and others to implement school feeding.
- **Stage 2 – Emerging:** *Stable contexts, limited capacity.* Government may rely on WFP and others to implement school feeding, but transition planning can be initiated.
- **Stage 3 – Established:** *Stable contexts, medium capacity.* Government has established a national programme but lacks the capacity to cover all requirements. The transition is under way, with WFP decreasing operational support.
- **Stage 4 – Advanced:** *Stable contexts, high capacity.* Government has an established national programme managed without WFP support.

16. About 20 percent of country offices are at the established or advanced stage, while 81 percent are at the latent or emerging stage, according to analysis of data from the 2012 school feeding survey (see Table 1). This analysis will be repeated every two years to determine the general direction of WFP’s operations, but not to set specific targets for the number of countries moving from one stage to another, which will depend on government priorities and whether there have been sudden changes in context, such as political instability, emergencies or economic crises. SABER will be introduced into all school feeding projects, to allow systematic planning of the transition at the country level (see paragraphs 60–62).

\(^\text{10}\) Including the United Nations Children’s Fund (UNICEF), the World Health Organization (WHO), PCD, Save the Children and academic institutions.

\(^\text{11}\) The SABER framework assesses a country’s school feeding efforts against a set of indicators, and has been used in more than 18 countries. [http://worldbank.org/education/saber](http://worldbank.org/education/saber)
### TABLE 1: WFP TRANSITION STAGES AND STATUS OF TRANSITION STRATEGY*

<table>

<td>0</td>
</tr>
</tbody>
</table>

* Transition stages were determined using information from the 2012 global school feeding survey and three indicators: income level of the country; existence of a policy framework; and existence of a national programme.

### Defining WFP’s Role

17. As the largest external partner supporting school feeding, WFP helps governments develop national school feeding programmes so that children in the poorest countries have access to the quality school feeding that is available elsewhere.

18. Depending on the transition stage of the country, WFP will play one or both of the following roles:

   i) **Service delivery.** WFP has operated school feeding programmes for more than 50 years, working with children and their families, government counterparts, non-governmental organizations (NGOs) and, increasingly, the private sector. WFP sub-offices, country offices, regional bureaux and Headquarters have expertise on appraisal, design, targeting, funding, management, logistics, procurement and monitoring.

   ii) **Capacity development and knowledge building.** Its experience has established WFP as a repository of global school feeding expertise. It analyses knowledge from countries and disseminates it among them, providing policy advice and technical support to low- and middle-income countries. Establishment of the Centre of Excellence Against Hunger has significantly enhanced WFP’s facilitation of South–South learning, policy dialogue and support to countries.

19. Table 2 illustrates the links between the SABER transition stages and WFP’s new Strategic Objectives and school feeding roles. In earlier transition stages, particularly in fragile contexts, WFP will focus on service delivery, shifting to capacity development at later stages. Experience has shown that the transition process is non-linear, with setbacks caused by disasters or political instability. The framework should therefore be taken as a general guide, and WFP will need to assess and determine its role according to the situation.

20. In most countries, WFP provides both technical advice to governments and direct support to operations. WFP country offices have to evaluate which is more important, to guide their decisions regarding staffing, resources and engagement at the technical and policy levels.

21. Rather than taking the lead in areas where it does not have a comparative advantage, WFP will support the efforts of specialized agencies or institutions in areas such as education quality – teachers, textbooks, curricula, etc. – and randomized controlled trials and other academic research.

22. Partners with comparative advantages in these areas include the World Bank, UNICEF, the United Nations Educational, Scientific and Cultural Organization (UNESCO), the Global Child Nutrition Foundation, the Food and Agriculture Organization of the United Nations (FAO), the International Fund for Agricultural Development (IFAD), the Bill and Melinda Gates Foundation, PCD, NGOs and academic institutions.

THE POLICY FRAMEWORK – SCHOOL FEEDING’S MULTIPLE BENEFITS

Social Protection and Child Development

23. WFP’s new Strategic Plan cites school feeding as a tool for contributing to all four Strategic Objectives. As a non-contributory transfer of resources to households, it functions similarly to other food- or cash-based transfers and has educational and nutrition benefits. WFP’s safety nets policy positions school feeding at the intersection of social services and hunger-related social safety nets, as part of WFP’s broader support to governments on hunger-related safety nets, which are, in turn, part of larger national social protection systems (see Figure 3).

Figure 3: Social Protection Components

Source: Adapted from Gentilini and Omamo, 2011

12 “WFP Strategic Plan (2014–2017)” (WFP/EB.A/2013/5-A/1)

24. School feeding often provides important nourishment for children in chronically food-insecure families; safeguards child nutrition and allows households to return to normalcy during and after crises; acts as a reliable income transfer to poorer families; offsets education and food costs; and decreases the risk that children are withdrawn from school.14

25. School feeding can increase enrolment and attendance – particularly of girls – and can contribute to learning if combined with quality education. With appropriately designed rations, school feeding can improve the nutrition status of preschool and primary school-aged children by addressing micronutrient deficiencies.15 Combined with local agricultural production, school feeding can also provide small-scale farmers with a predictable market. Thus, school feeding provides both short-term benefits during and after crises, helping communities recover and build resilience, and longer-term benefits, in building human capital.16

26. School feeding programmes have proved relatively easy to scale up in crises. Almost 40 countries scaled up programmes between 2008 and 2012, in response to shocks such as armed conflict, natural disasters and food and financial crises.17 Heightened interest in school feeding has also been evident in recession-hit, high-income countries.18

Cost-effectiveness, Quality and Implications for WFP

27. The effectiveness of school feeding is difficult to assess because of school feeding’s many benefits. There is strong evidence documenting school feeding’s effects on individual outcomes19 but no methodology for quantifying their aggregate impact. Based on a modelling exercise, WFP estimates that school feeding has a cost–benefit ratio of between 1:3 and 1:8.20

28. WFP and partners will assess the cost-effectiveness of school feeding and are developing tools for analysing the ex-ante cost-efficiency and cost-effectiveness of cash, vouchers and food transfers; internal evaluations of the process for selecting transfer modalities are ongoing.

29. The difficulty in measuring cost-effectiveness also affects other programmes with multiple benefits, and many of the issues described below are similar to those faced by other safety nets.

20 WFP and the Boston Consulting Group (BCG) developed the “school feeding investment case”, which quantifies the value created for each dollar invested in school feeding using evidence from three sets of benefits: nutrition, education and income transfer. The tool does not yet incorporate the impact of school feeding on local agricultural production.
30. **Predictability and adequacy.** Predictability refers to the regularity of meal provision; adequacy refers to the quantity, nutritional quality and timeliness of rations. Factors that affect service provision include lack of stable funding, unavailability of food, and weak or unstable local capacity to prepare and provide food. Governments, WFP and partners need to avoid pipeline breaks or resourcing problems that may cause reductions in ration sizes and numbers of feeding days.

31. **Synergies with other programmes.** School feeding is a multisectoral intervention, normally led by the education sector, although about 90 percent of the countries in WFP’s 2012 school feeding survey reported more than two sectors collaborating in school feeding. According to recent case studies, coordination across ministries is a challenge, especially in fragile or low-capacity contexts, where a gradual integration of programmes may be needed. School feeding should be linked to programmes assisting children at different stages of the life cycle and to community development, asset creation and resilience initiatives.

32. **Equity.** School feeding programmes risk excluding the poorest children and including children from non-poor households. Exclusion errors may occur in areas with large proportions of out-of-school children, where the barriers to school attendance should be identified to determine whether school feeding can address them.

33. The extent of inclusion errors depends on the context, the targeting approach and the cost of targeting. About 90 percent of low-income countries and all WFP-supported operations use geographical targeting rather than the individual targeting commonly used in high-income countries, because the selection and registration process is less complex and costly and less likely to stigmatize children. In countries with high poverty rates and where school feeding targets the poorest areas, most of the benefits reach the poor without requiring individual targeting. In more heterogeneous contexts, there is greater chance of providing free meals to children whose families have the capacity to pay for them. In these cases, individual targeting or the introduction of cost-recovery methods – with non-poor families paying for meals to offset the costs of feeding poorer children – may be more appropriate, although the costs should be weighed against the potential benefits.

34. Some governments prefer to provide some school feeding to all regions of the country, which increases the political impact but dilutes the efficiency of targeting. Urban areas may be prioritized over rural areas, or accessible schools over harder-to-reach ones. Evidence-based policy advice from WFP and partners can facilitate better decision-making to ensure that programmes prioritize the poor.

35. **Costs:** Although school feeding costs in most countries are close to international benchmarks – on average, per-child school feeding costs constitute 10–15 percent of the costs of basic education – in some low-income countries the per-child cost of school feeding exceeds that of education, indicating opportunities for cost containment. WFP and partners are working with these countries to explore the cost drivers of the programmes.

---

21 The main collaborating sector is health, followed by agriculture and local development.

22 Such as mother-and-child nutrition, early childhood development, and school health and nutrition programmes.

23 A few countries provide meals to all schoolchildren, under universal school feeding programmes.

THE FIVE OBJECTIVES OF WFP’S WORK IN SCHOOL FEEDING

36. The particular objectives and roles of each operation depend on the context, needs, national goals and government capacity. A single programme may not achieve all the objectives, and the pursuit of each objective presents trade-offs against the others. The objectives must take into account the conditions on the ground and the availability and capacity of partners.

Objective 1: To Provide a Safety Net for Food-Insecure Households through Income Transfers

37. School feeding transfers income in the form of food to households. The transfer value depends on the modality, the ration contents and the context. Take-home rations or vouchers can provide higher transfer values, averaging 26 percent of household income,26 than snacks, averaging 4 percent,27 and meals, averaging 10–14 percent.1

38. This objective is particularly important in crises and periods of stress when households may need additional food support. After the initial shock of a crisis, the school system can provide an effective way of scaling up safety nets, such as school feeding, providing a sense of normalcy, protecting children and teachers, and building social cohesion.

Objective 2: To Support Children’s Education through Enhanced Learning Ability and Access to the Education System

39. WFP school feeding has traditionally focused on access to education. Strong evidence shows that school feeding can act as an incentive to enhance enrolment and reduce absenteeism, especially for girls.28 Access to education will continue to be a focus where there are large numbers of out-of-school children, gender disparities persist, and school feeding – with other interventions – can help to draw hard-to-reach children into the education system.

40. In line with global efforts to improve the quality of education, WFP will increase its focus on school feeding’s contribution to learning. School feeding may enhance a child’s ability to concentrate if it provides appropriate micronutrients, particularly if the meal is consumed before lessons begin. WFP will continue to ensure that school feeding is provided where other elements – trained teachers, curricula, infrastructure and text books – are already in place, through the Nourishing Bodies, Nourishing Minds initiative launched in 2013 and other partnerships in the education sector.

---

Objective 3: To Enhance Children’s Nutrition by Reducing Micronutrient Deficiencies

41. WFP provides nutritious meals in all school feeding projects. Where micronutrient deficiencies are high,\(^{29}\) it will design programmes to provide the lacking micronutrients, including vitamin A, iodine, iron and zinc, which can affect the ability to learn. The primary delivery mechanism will continue to be through multi-fortified foods, as a cost-effective way of ensuring a nutrient-rich diet where foods of high micronutrient content – meat, fruits and vegetables – are not readily available or are unaffordable.

42. Where feasible, WFP will design programmes that promote dietary diversity by using foods from several food groups. It will keep track of costs and ensure appropriate nutrient intake for children, in coordination with partners with expertise and resources, including ministries, FAO, WHO, UNICEF, UNESCO, NGOs and communities.

43. WFP will work with partners to ensure that school feeding is provided alongside school health and nutrition interventions – such as water and sanitation, deworming, health and nutrition education, and periodic health screening – that contribute to an environment conducive to learning and protective of children’s health.

44. While WFP will continue to focus on primary schoolchildren, it will seize opportunities for delivering micronutrients and nutrition education to pre-primary children and adolescents, especially girls, who are at high risk of micronutrient deficiencies and key to reversing the cycle of hunger and malnutrition,\(^{30}\) but difficult to reach by other routes.

45. In developing school feeding programmes, WFP, governments and partners will take nutrition concerns into account, including emerging overweight and obesity issues. WFP will incorporate these concerns into programme design tools, to avoid providing inappropriate food rations.

Objective 4: To Strengthen National Capacity for School Feeding through Policy Support and Technical Assistance

46. WFP will continue to meet government demand for assistance in integrating school feeding into national policy and legal frameworks, designing efficient and sustainable national programmes and securing stable sources of funding. WFP will support governments in developing school meal policies that are culturally sensitive and in line with national dietary guidelines.

47. WFP will enhance the capacity of national institutions to integrate school feeding into broader safety net systems, by providing technical assistance in targeting, nutrition, procurement, logistics, food processing, quality control, cost analysis, and monitoring and evaluation (M&E).

48. Where appropriate and cost-efficient, WFP will provide governments with services such as procurement, logistics and capacity development to support the transition to government ownership.

---

\(^{29}\) When anaemia levels among school-aged children are above 40 percent.

WFP will continue to promote South–South and triangular cooperation to strengthen national capacities for school feeding and facilitate policy dialogue, particularly through the Centre of Excellence Against Hunger. WFP is developing partnerships with countries to support South–South and triangular collaboration in food security and nutrition areas, and reviewing good practices from its own experiences.

Objective 5: To Develop Links between School Feeding and Local Agricultural Production Where Possible and Feasible

Governments are increasingly interested in linking school feeding to locally produced food, for long-term food security, supporting not only beneficiary children but also the development of markets, the livelihoods of smallholder farmers, traders and caterers, and local food processing industries.

WFP has considerable experience in sourcing and processing food in developing countries; helping local manufacturers implement quality control measures and optimize production processes for maximum nutritional benefits, shelf-life and acceptability; and working with agricultural development partners, farmers’ organizations, small- and medium-scale traders and nascent trading platforms through the pilot Purchase for Progress (P4P) programme and other country-led initiatives.

Depending on the country and policy environment, WFP can: i) adapt its school feeding programmes to include local purchase, especially to benefit smallholder farmers, particularly women; and/or ii) advise governments on strategies for linking national school feeding programmes to local agricultural production.

Several country offices have begun innovative school feeding programmes that include local purchase, local processing or decentralized procurement, with partners such as FAO and IFAD. At least seven of the 21 P4P countries report linking P4P to school feeding.

Evidence of the impacts of these programmes on the local economy and smallholder farmers is expected in 2014. Through the P4P learning agenda, WFP and specialized partners are documenting good practices and impacts, to help determine the specific results that WFP should seek to achieve and how to measure them.

---

34 For example, the 2012 Government of Brazil, WFP and FAO Purchase from Africans for Africa initiative in Ethiopia, Malawi, Mozambique, the Niger and Senegal.

36 According to a recent inquiry by the P4P Unit. Another four country offices plan to establish such links.
### Defining the Objectives in Practice – Trade-offs and Key Decisions

55. WFP’s school feeding programmes should be sustainable, targeted and cost-effective and should provide nutritious rations, using locally produced foods to the extent possible. Balancing these issues may require some of the following trade-offs.

56. **Choosing the primary objective(s) of the operation.** Not all objectives can be achieved in one programme, and each presents trade-offs in relation to the others. Based on situation analysis, governments and WFP must determine the primary objective(s) and design the operation accordingly. A central element is the modality – snacks, meals, take-home rations or a combination – each of which has different benefits, costs and operational requirements. Meals and snacks can increase children’s energy and micronutrient intake, while take-home rations are shared with the family and may not contribute to improving children’s nutrition status. Meals provide more calories than snacks, but may require storage, cooking facilities and levels of community participation that may not be available in fragile or urban settings. Take-home rations are the most expensive modality, but can target specific beneficiaries, such as girls, orphans or children affected by HIV/AIDS; provide more income to the entire household; and do not require school infrastructure.

57. **Nutritional quality of locally purchased foods.** Locally purchased food must meet the nutrient needs of children, which it does not always do. Micronutrient powders can complement meals with below-standard micronutrient contents. Some country offices are piloting the introduction of fruits, vegetables and dairy products to diversify diets and increase micronutrients, but WFP’s ability to purchase these products is limited by cost, stability and food safety concerns. The expansion of cash and voucher transfers represents a significant opportunity for increasing the local sourcing of school feeding supplies. The participation of government, partners and communities is essential for expanding the use of locally purchased foods.

58. **Purchasing locally, regionally or internationally.** Purchasing from smallholder farmers may not be cheaper than buying at the national, regional or international level. Purchasing from farmers’ groups close to schools may increase the costs because of lower economies of scale, but can also lower transportation and handling costs and increase community support and participation in school feeding programmes. Where WFP manages procurement with donor funding, it will review individual cases to assess whether paying higher prices for locally produced food is justified by the benefits to the local economy, farmers’ access to markets and food security. Where governments finance the programmes, they may choose to pay higher prices for locally produced or procured food to benefit local economies.

59. **Exploring better ways of reaching beneficiaries.** Wherever feasible, country offices should incorporate new tools such as cash, vouchers or local purchase, to increase the effectiveness of programmes, explore better ways of providing assistance to beneficiaries and facilitate potential hand-over to governments. This may lead to programmes providing cash to districts, as in Ethiopia, or schools, as in Kenya; providing vouchers in conjunction with local caterers; or substituting in-kind take-home rations with cash, as in Cambodia.

---

Each programme type presents trade-offs in addition to the nutrition and cost issues: i) food may not always be available near the school, especially in the most food-insecure areas; ii) some models may be appropriate for urban and others for rural areas; iii) local-level accountability systems may need to be reinforced; and iv) the capacity of the district or community should be analysed to avoid exacerbating inequities because poorer areas may be less able to provide quality services.

**TWO NEW REQUIREMENTS FOR WFP SCHOOL FEEDING OPERATIONS**

60. **Assessment.** The SABER assessment framework will be mainstreamed into the preparation of all WFP school feeding projects. It is based on the school feeding standards presented in WFP’s 2009 school feeding policy, which have been reduced to five policy goals (see Table 4). The framework will enable governments and WFP country offices to assess the quality of programmes and address challenges. Country offices will be required to present the results of the assessment in all project documents with a school feeding component. SABER results from all projects will be compiled at Headquarters for overall analysis of trends and compliance with the school feeding policy.

---

39 WFP will continue to: i) ensure that elements of the Essential Package are provided – promotion of girls’ education, potable water and latrines, health and nutrition education, deworming, HIV and AIDS education, psycho-social support, malaria prevention, fuel-efficient stoves and school gardens; ii) mainstream protection and gender considerations into all projects; iii) adhere to the International Network for Education in Emergencies’ Minimum Standards for Education in Emergencies; and iv) ensure context analysis to minimize protection risks such as violence towards students, especially girls. WFP’s position on school gardens continues to be that they are very useful learning and demonstration tools as part of the overall curriculum on nutrition education to help strengthen community participation. They can supplement school meals in some cases, but should not be expected to produce enough food to cover all the needs of programmes. School gardens should not form part of sustainability strategies in which the community, the teachers or the children are expected to sustain the programme entirely.

40 The switch from “quality standards” to “policy goals” reflects the preference of governments and partners for moving towards goals rather than setting standards. This revised policy aligns WFP’s policy and practice to the internationally recognized assessment framework for school feeding. Existing guidance will be updated and augmented in line with the new five policy goals.
**TABLE 4: CONVERTING THE EIGHT QUALITY STANDARDS INTO FIVE POLICY GOALS**

</tbody>
</table>

61. **Costs.** In all new projects with a school feeding component, country offices will be required to report the planned absolute cost of school feeding per child, per year in all new project documents. This information will then be compared with established thresholds for acceptable, high or very high costs at the Headquarters level. Country offices with very high costs will need to provide a justification and/or devise cost containment strategies.⁴¹

62. Guidance on these new requirements will be developed and disseminated to all country offices together with this revised policy.

**MONITORING AND EVALUATION**

63. WFP will develop a comprehensive M&E strategy for school feeding. Revised corporate outcome and output indicators in line with this revised policy are included in the new SRF (see Annexes I and II). Annual standard project reports will continue to generate outcome- and output-level data for WFP school feeding programmes.

64. WFP will administer a global school feeding survey every two years to track progress in policy implementation. Country-specific progress will be tracked through the SABER assessment framework.

---

⁴¹ WFP and BCG developed the cost benchmark methodology for determining the actual costs of WFP school feeding operations in each country, based on analysis of sea access, number of items in the food basket, income status and country context – emergency versus more stable. Annual data collected since 2008 enable the calculation of five-year averages and a standard deviation range, on which WFP will base its cost thresholds.
The P4P learning agenda, the evaluation report scheduled for 2014 and the M&E framework based on P4P experiences – which will include public procurement and the connection between P4P and school feeding – will inform future changes in WFP’s guidance and indicators.

**MOVING FORWARD – WFP PRIORITY ACTIONS**

**Supporting Quality of Education through a Renewed Partnership**

Recognizing their complementary roles, WFP, UNICEF and UNESCO launched the Nourishing Bodies, Nourishing Minds initiative to improve the quality of education. This field-led effort will be implemented in four pilot countries with potential for innovation and opportunities for defining replicable partnership models – Haiti, Mozambique, the Niger and Pakistan. As well as strengthening existing collaboration, including with governments, the three-year initiative will seek support from private sector partners. Expected outcomes include improved child health and nutrition; expanded access to early childhood care; improved enrolment rates for girls, focusing on adolescent girls; collaboration with communities and governments in building school environments that are conducive to learning; and evidence demonstrating the synergies among education, health and nutrition.

**Continue Strengthening the Evidence Base**

WFP will continue to work with partners on the 2009 research agenda that was updated in 2013. Research topics include the efficiency of geographical targeting in low-income countries; in-depth analysis on the cost drivers of programmes; country-specific impact evaluations; and the impacts of purchasing from smallholder farmers. Specialized academic partners such as PCD will lead most of the research, with support from WFP. Two publications on school feeding lessons learned and good practice will be launched in 2014.

**Supporting Governments in Establishing and Maintaining National Programmes**

WFP will continue to respond to countries’ demand for policy advice and technical assistance for sustainable national programmes, as part of broader support to safety nets. It will make efforts to bring together the education, health and agriculture sectors, strengthen its relationship with FAO and make optimum use of support from the private sector.

Through the Centre of Excellence Against Hunger and other initiatives, WFP will continue to triangulate collaboration among countries and support high-level policy dialogue on broader issues related to food security, nutrition and safety nets. WFP and the World Bank will strengthen collaboration on school feeding in the context of a broader partnership agreement between the two organizations.

More than half of the sustainable national programmes currently being implemented in middle- and low-income countries began with support from WFP. This revised policy

---

42 WFP has established a partnership with the United Kingdom-based research consortium Public Health Nutrition Research (PHNR) to gather and analyse information about school feeding in high-income countries – a major knowledge gap that is beyond WFP’s mandate and capacity.

43 WFP is developing a comprehensive guidance framework for hunger-related safety nets, including school feeding, for dissemination to country offices in early 2014.
presents the results and lessons learned from analyses of these experiences over the last five years. By adopting these new policy directions, WFP will be better-placed to assist governments in developing effective school feeding programmes that contribute to the elimination of poverty and hunger and promote national prosperity.
WFP'S Contribution to Addressing Child Hunger

**Objectives**
- Role #1: Service Delivery: Support to Beneficiaries
- Role #2: Capacity Development: Support to Institutions and Markets

**Outputs**
- Food/income transfer
- Food energy
- Food quality
- Technical and policy support
- Local food purchased for school feeding

**Outcomes**
- Impacts
  - Increased productivity and higher income
  - Improved health and nutrition
  - Alleviated hunger
  - Improved ability to learn
  - Improved health behaviours
  - Improved school achievement
  - Increased school progression
  - Increased household income and food availability
  - Increased household food security and resilience
  - Alleviated hunger
  - Strengthened local capacity
  - Enhanced sustainability of school feeding
  - Strengthened national hunger-related safety nets
  - Improved effectiveness of national policies and programmes to address hunger
  - Improved school progression
  - Increased school enrolment and retention

**Annex I**
### School Feeding as Reflected in WFP’s Strategic Results Framework

<table>
<thead>
<tr>
<th>Strategic Objective 1:</th>
<th>Strategic Objective 2:</th>
<th>Strategic Objective 3:</th>
<th>Strategic Objective 4:</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Save lives and protect livelihoods during emergencies</strong></td>
<td><strong>Support or restore food security and nutrition and establish or rebuild livelihoods in fragile settings and following emergencies</strong></td>
<td><strong>Reduce risk and enable people, communities and countries to meet their own food and nutrition needs</strong></td>
<td><strong>Reduce undernutrition and break the intergenerational cycle of hunger</strong></td>
</tr>
</tbody>
</table>

#### Strategic Objective 1: Adequate Food Consumption

1. **Stabilized or improved food consumption over assistance period for targeted households**
   - Related indicators:
     - 1.2.1 Food consumption score
     - 1.2.3 Coping strategy index

2. **Restored or stabilized access to basic services and critical community assets**
   - Related indicator:
     - 1.3.1 Retention rate for boys and girls

3. **Reduced undernutrition, including micronutrient deficiencies among children aged 6–59 months, pregnant and lactating women, and school-aged children**
   - Related indicator:
     - 2.3.5 Average number of schooldays per month with provision of multifortified foods or at least four food groups

#### Strategic Objective 2: Improved Access to Assets and Basic Services

4. **Adequate food consumption reached or maintained over assistance period for targeted households**
   - Related indicators:
     - 2.1.1 Food consumption score
     - 2.1.3 Coping strategy index

5. **Improved access to assets and basic services including community and market infrastructure**
   - Related indicator:
     - 2.2.2 Retention rate for boys and girls

#### Strategic Objective 3: Increased Marketing Opportunities

6. **Enhanced resilience and reduced risk of disasters and shocks through improved access to livelihood assets for targeted food-insecure communities and households**
   - Related indicators:
     - 3.1.2 Food consumption score
     - 3.1.4 Coping strategy index

7. **Increased marketing opportunities for producers and traders of agricultural products and commodities at regional, national and local levels**
   - Related indicators:
     - 4.2.1 Enrolment rate of girls and boys
     - 4.2.2 Retention rate of girls and boys

8. **Stabilized or reduced undernutrition, including micronutrient deficiencies among children aged 6–59 months, pregnant and lactating women, and school-aged children**
   - Related indicators:
     - 4.2.2 Fortified foods purchased from regional, national and local suppliers, as % of fortified food distributed by WFP in-country
     - 4.2.5 Food purchased from aggregation systems with smallholders’ participation, as % of regional, national and local purchases

9. **Increased equitable access to assets and utilization of education**
   - Related indicators:
     - 4.3.1 National capacity index/SABER

---

1 Some indicators are already used in WFP school feeding; others are being introduced for the first time. Two WFP outcome-level indicators are relevant to measuring safety net objectives, each providing a slightly different picture: the food consumption score and the coping strategy index. A new indicator has replaced anaemia levels to measure the effect of school feeding on micronutrient deficiencies (see indicator 4.1.5). The national capacity index for school feeding will be based on the SABER framework. Guidance on how to use and measure these indicators for school feeding will be issued with the SRF and the review of the indicator compendium.
